

Gordini®

We keep you outside longer.®

Athlete: Gabby Palko

Gordini 2022-2023

Basée dans le Vermont et développée au sein d'une entreprise indépendante et novatrice, la Marque **Gordini** repousse depuis 60 ans les limites de la création et du design dans le domaine des gants.

L'entreprise est devenue leader dans le monde des accessoires contre le froid, développant des produits de haute performance et de haute qualité qui combinent des matériaux reconnus avec ce qui se fait de mieux en technologie. Travaillant à proximité de l'une des stations de ski les plus iconiques du Vermont, l'équipe Gordini concilie au quotidien travail et passion pour toujours s'assurer que le matériel qu'ils produisent peut endurer les conditions les plus exigeantes saison après saison.

Styles noting the "Designed in Partnership" badge indicate an inspired collaboration with our professional athlete team. Our design experts consult and test with our athletes to bring a product concept from initial sketch to market.

Technologie GORDINI

La technologie **GORE-TEX®**, reconnue et inégalée, empêche l’eau de pénétrer à travers les tissus tout en en permettant à la transpiration de s’échapper facilement. Le résultat est un gant totalement respirant et étanche. Grace à sa structure microporeuse originale de sa membrane **GORE-TEX®**, les gants GORDINI qui en sont équipés sont totalement étanches. Chaque pore microscopique est environ 20 000 fois plus petit qu’une goutte d’eau, ce qui signifie qu’aucune humidité extérieure, de la pluie à la neige, ne peut pénétrer la membrane. Les pores de la membrane GORE-TEX® sont 700 fois plus gros qu’une molécule de vapeur d’eau, de sorte que la transpiration peut facilement s’évaporer. L’insert **GORE-TEX®** est imperméable, coupe-vent et respirant.

Optimisé pour renforcer la respirabilité - le niveau de confort augmente, et avec le nombre d’activités pratiquées.

Confère une grande dextérité et une tactilité exceptionnelle pour une prise sûre : ce qui permet une meilleure tenue en main des bâtons de ski, fermetures éclair, lunettes, sacs, etc.

Gants conçus avec la technologie **GORE-TEX INFINIUM™ WINDSTOPPER®** pour offrir un effet coupe-vent absolu tout en étant particulièrement respirant. Ils protègent efficacement contre le refroidissement et assurent une gestion idéale de l’humidité. . Cette nouvelle collection est conçue pour offrir un confort d’utilisation optimum.

- AVANTAGES :**
- TOTALEMENT COUPE-VENT.
 - GESTION DE LA RESPIRABILITÉ PARFAITE.
 - CONFORT D’UTILISATION MAXIMUM.

Le duvet **Downtek®** Water Repellent est un duvet traité avec un nano-traitement déperlant. C’est une méthode d’application exclusive au lieu d’un traitement classique, éliminant ainsi le ruissellement de la transpiration qui affecte le duvet.

Aquabloc® est la technologie waterproof et stop-vent respirant brevetée par GORDINI®. Conçue exclusivement pour les gants, il s’agit d’une technologie d’insert qui permet à l’humidité accumulée à l’intérieur du gant de s’échapper pour fournir une respirabilité accrue afin de garder la chaleur et d’avoir un confort maximum. Les molécules de l’insert sont suffisamment larges pour permettre à l’humidité de s’échapper, tout en restant suffisamment fines pour garantir que l’eau ne pénètre pas dans le gant. Ces inserts sont scellés par couture, pour préserver la performance de votre gant GORDINI®.

Nos inserts imperméables **DriMax®** offrent une protection optimale par temps froid et humide.

Notre concept isolant haut de gamme en duvet d’oie, **GooseDown** est conçu pour ne jamais s’agglomérer ni laisser entrer le froid. Une structure unique capture le duvet dans de petits espaces, garantissant que le duvet est réparti uniformément et ne migre pas. Les moufles **GooseDown** ont une isolation enveloppante pour une chaleur unique, tandis que les gants GooseDown ont en plus une isolation synthétique Megaloft® sur les paumes pour optimiser votre chaleur et garder un toucher indispensable. Gordini soutient la norme de duvet responsable..

Avec **ErgoKnit™**, Gordini® apporte une technologie révolutionnaire de “tricot 3D” aux protection des mains. La construction en tricot réduit les coutures jusqu’à 80%, offrant plus de chaleur avec moins de volume. Les points flexibles conçus augmentent la dextérité et l’amplitude des mouvements. (Brevet en instance)

Lavawool® est conçu par GORDINI pour combiner la chaleur de la laine avec le confort d’un intérieur polaire. Dans nombre de tests indépendants, Lavawool® surpasse à 100% les leaders de la laine et des principaux tissus synthétiques. Comment ? **Lavawool®** utilise les propriétés isolantes inhérentes à la laine pour vous garder au chaud. Mais contrairement à la laine pure, qui absorbe et retient l’humidité, **Lavawool®** élimine rapidement l’humidité de votre peau grâce à son tissage breveté de fibres synthétiques et de laine. Cette originalité des fibres **Lavawool®** a pour avantage de vous garder plus sec et plus chaud partout où vos aventures hivernales vous emmènent.

LES TAILLES DES GANTS GORDINI

THINDOWN

HANDS DOWN THE WARMEST PAIR

THINDOWN
DOUBLING DOWN BY DESIGN

Le premier tissu duvet au monde révolutionne aujourd'hui l'équipement du froid. Il possède tous les avantages du duvet matelassé. Thermique, respirant, léger et compact, ce gant a été redessiné pour éliminer les points froids et offrir une chaleur supérieure.

THINDOWN® double la chaleur d'un duvet normal et est très léger. Ce qui vous permet de rester dehors plus longtemps.

Engagé dans des alternatives responsables et éthiques, Thindown modifie fondamentalement notre vision de la plume tout en apportant des qualités supérieures à ce gant révolutionnaire.

OEKO-TEX®
CONFIDENCE IN TEXTILES
STANDARD 100

THINDOWN® Innovation

LEGER

Léger comme une plume, le duvet est fixé dans le tissu

CHALEUR

Des performances optimales avec deux fois plus de chaleur que le duvet classique, sans ajouter de volume

TRÈS RESPIRANT

Le duvet naturel permet une circulation d'air maximale

THERMORÉGULATEUR

La répartition uniforme du duvet assure une chaleur constante et la chaleur se règle en fonction du temps

DURABLE

La structure du tissu élimine la nécessité d'une couture supplémentaire et d'un matelassage en canal, ce qui met fin aux fuites et aux amas de plumes.

MINCE ET FACILE À TRANSPORTER

Compact, flexible et conçu pour un usage spécifique, sans peluche.

RESPONSABLE

Une alternative éthique et polyvalente aux isolants traditionnels. Fabriqué avec duvet traçable et durable, certifié RDS ou GRS. Certifié OEKO-Tex pour un avenir plus transparent pour les textiles, notre planète et notre santé.

Gants et Mouffles HOMME

Radiator Muffle

4M1096

Conçu pour les sommets difficiles, les nuits et journées froides au camp de base, équipement essentiel à mettre dans votre sac pendant que vous attendez une fenêtre météo.

Cuir synthétique Clutch™

Le cuir synthétique Clutch™, notre signature, offre une alternative sans animaux qui surpasse les cuirs traditionnels en termes de durabilité et la fonctionnalité.

Durabilité :
Un tissu plus résistant pour que votre accessoire puisse durer plus longtemps et que vous puissiez jouer intensivement. Il est prouvé qu'il est 4 à 6 fois plus résistant à l'abrasion que les cuirs les plus durables dans le domaine du gantage.

Respirabilité :
Meilleures performances en compétition, permettant à la transpiration de s'échapper pendant l'action. 40% plus respirant que les cuirs de vachette de la même épaisseur.

Responsabilité :
Prolonge la durée de vie des gants et réduit la dépendance à l'égard des cuirs d'origine animale grâce à des matériaux et une fabrication raisonnable, fiable et économe en ressource.

- Une durée de vie plus longue du produit signifie moins de déchets.
- Utilisation de 4 produits chimiques au maximum, contre 48 pour le cuir.
- On estime qu'il faut 60 % d'eau en moins que pour la fabrication du cuir.
- Garantie en qualité, en coloration et en épaisseur.

 **Clutch™, c'est le mieux pour tout ce que l'hiver vous emmène et pour la planète !**
