Gordini®

Athlete: Julian Carr

Gordini 2023-2024

Basée dans le Vermont et développée au sein d'une entreprise indépendante et novatrice, la Marque Gordini repousse depuis 60 ans les limites de la création et du design dans le domaine des gants. L'entreprise est devenue leader dans le monde des accessoires contre le froid, développant des produits de haute performance et de haute qualité qui combinent des matériaux reconnus avec ce qui se fait de mieux en technologie. Travaillant à proximité de l'une des stations de ski les plus iconiques du Vermont, l'équipe Gordini concilie au quotidien travail et passion pour toujours s'assurer que le matériel qu'ils produisent peut endurer les conditions les plus exigeantes saison après saison.

SUPPORT YOUR SOLES

WITH BETTER SOCKS

 **Gordini** Socks

Les chaussettes révolutionnaires qui aident à garder votre corps au chaud lorsque qu'il fait froid dehors.
Une technologie pour pieds d'abord conçue pour l'hiver et adaptée à l'aventure.
Nous nous concentrons sur vos pieds, pour que vous n'ayez pas à le faire.

SoleKNIT™
DUAL LAYER

STRONG OUTSIDE, SOFT INSIDE. SOCKS FOR THE SOLE.

La technologie SoleKNIT™ est la fusion de plusieurs couches en un seul tricot !
Il combine un intérieur doux près de la peau, avec un extérieur solide et durable.
Cette technologie réunit les bénéfices de plusieurs styles de chaussettes afin de vous proposer le meilleur compromis.

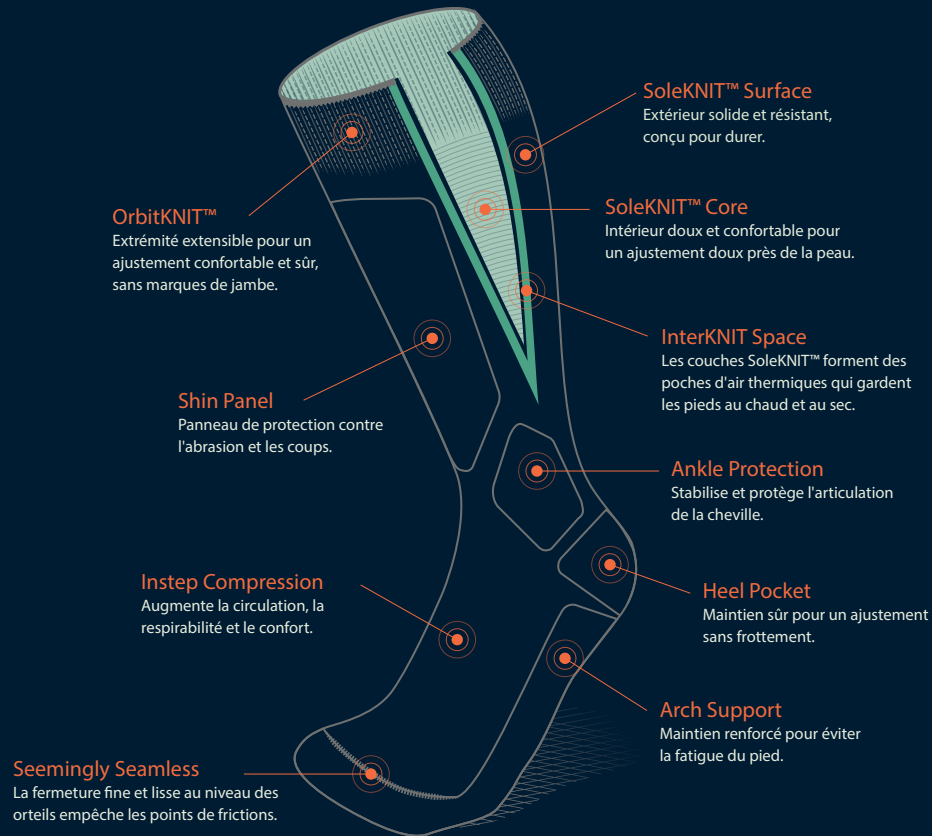

OrbitKNIT™

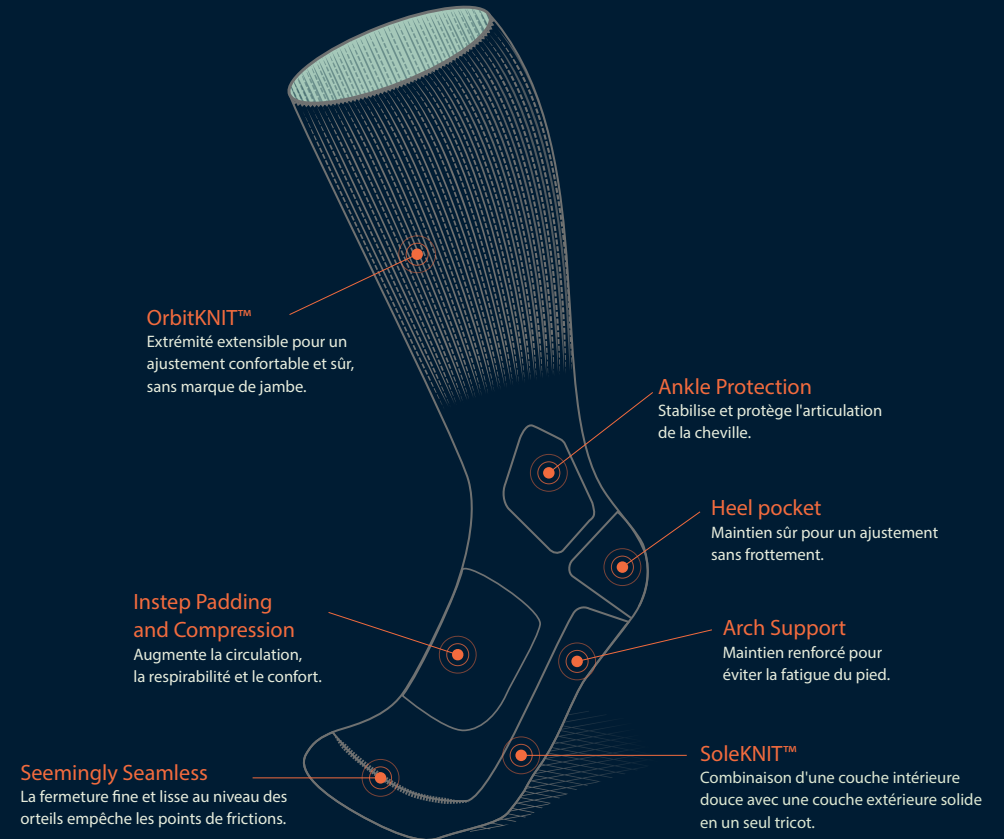

THE MARK OF A PERFECT FIT, IS NO MARKS AT ALL.

Les chaussettes OrbitKNIT™ ont une apparence et une sensation des plus agréables.
Cette véritable technologie de tissage aide vos chaussettes à rester en place sans compression et sans inconfort. Le tissage OrbitKNIT™ se dilate et s'étire structurellement autour de la jambe, s'adaptant à toutes les formes et tailles pour un ajustement universellement amélioré.

MEN'S
GLOVES

Cuir synthétique Clutch™

Le cuir synthétique Clutch™, notre signature, offre une alternative sans animaux qui surpasse les cuirs traditionnels en termes de durabilité et la fonctionnalité.

Durabilité

Un tissu plus résistant pour que votre accessoire puisse durer plus longtemps et que vous puissiez jouer intensivement. Il est prouvé qu'il est 4 à 6 fois plus résistant à l'abrasion que les cuirs les plus durables dans le domaine du gantage.

Respirabilité

Meilleures performances en compétition, permettant à la transpiration de s'échapper pendant l'action. 40% plus respirant que les cuirs de vachette de la même épaisseur.

Responsabilité

Prolonge la durée de vie des gants et réduit la dépendance à l'égard des cuirs d'origine animale grâce à des matériaux et une fabrication raisonnable, fiable et économe en ressource.

- Une durée de vie plus longue du produit signifie moins de déchets.
- Utilisation de 4 produits chimiques au maximum, contre 48 pour le cuir.
- On estime qu'il faut 60"% d'eau en moins que pour la fabrication du cuir.
- Garantie en qualité, en coloration et en épaisseur.

Clutch™

Better for wherever winter takes you – and for the planet.

- Plush, high-pile fleece lining at back of hand
- Moisture-wicking lining on palm
- Gauntlet cuff with side zip and wrist strap

 **Megaloft®**

La technologie GORE-TEX®, reconnue et inégalée, empêche l'eau de pénétrer à travers les tissus tout en permettant à la transpiration de s'échapper facilement. Le résultat est un gant totalement respirant et étanche. Grâce à sa structure microporeuse originale de sa membrane GORE-TEX®, les gants GORDINI qui en sont équipés sont totalement étanches. Chaque pore microscopique est environ 20 000 fois plus petit qu'une goutte d'eau, ce qui signifie qu'aucune humidité extérieure, de la pluie à la neige, ne peut pénétrer la membrane. Les pores de la membrane GORE-TEX® sont 700 fois plus gros qu'une molécule de vapeur d'eau, de sorte que la transpiration peut facilement s'évaporer. L'insert GORE-TEX® est imperméable, coupe-vent et respirant.

Optimisé pour renforcer la respirabilité - le niveau de confort augmente, et avec le nombre d'activités pratiquées.

Confère une grande dextérité et une tactilité exceptionnelle pour une prise sûre : ce qui permet une meilleure tenue en main des bâtons de ski, fermetures éclair, lunettes, sacs, etc.

Aquabloc® est la technologie waterproof et stop-vent respirant brevetée par GORDINI®. Conçue exclusivement pour les gants, il s'agit d'une technologie d'insert qui permet à l'humidité accumulée à l'intérieur du gant de s'échapper pour fournir une respirabilité accrue afin de garder la chaleur et d'avoir un confort maximum. Les molécules de l'insert sont suffisamment larges pour permettre à l'humidité de s'échapper, tout en restant suffisamment fines pour garantir que l'eau ne pénètre pas dans le gant. Ces inserts sont scellés par couture, pour préserver la performance de votre gant GORDINI®.

Nos inserts imperméables DriMax® offrent une protection optimale par temps froid et humide.

Le premier tissu duvet au monde révolutionne aujourd'hui l'équipement du froid. Il possède tous les avantages du duvet matelassé. Thermique, respirant, léger et compact, ce gant a été redessiné pour éliminer les points froids et offrir une chaleur supérieure. THINDOWN® double la chaleur d'un duvet normal et est très léger. Ce qui vous permet de rester dehors plus longtemps. Engagé dans des alternatives responsables et éthiques, Thindown modifie fondamentalement notre vision de la plume tout en apportant des qualités supérieures à ce gant révolutionnaire.

Le duvet Downtek® Water Repellent est un duvet traité avec un nano-traitement déperlant. C'est une méthode d'application exclusive au lieu d'un traitement classique, éliminant ainsi le ruissellement de la transpiration qui affecte le duvet.

Notre concept isolant haut de gamme en duvet d'oie, GooseDown est conçu pour ne jamais s'agglomérer ni laisser entrer le froid. Une structure unique capture le duvet dans de petits espaces, garantissant que le duvet est réparti uniformément et ne migre pas. Les moufles GooseDown ont une isolation enveloppante pour une chaleur unique, tandis que les gants GooseDown ont en plus une isolation synthétique Megaloft® sur les paumes pour optimiser votre chaleur et garder un toucher indispensable. Gordini soutient la norme de duvet responsable.

L'isolation PrimaLoft® a été développée à l'origine pour l'armée américaine en tant qu'alternative synthétique résistante à l'eau au duvet. Aujourd'hui, la marque est reconnue comme une référence dans l'industrie du plein air pour offrir un confort inégalé dans toutes les conditions. PrimaLoft, Inc. est active dans la production textile durable grâce à des partenariats avec le système bluesign®, l'Association internationale OEKO-TEX®, l'indice Higg de la Sustainable Apparel Coalition et le Global Recycled Standard.

Polartec® Thermal Pro fait progresser la mode polaire avec une nouvelle structure de tricot pour les options de style les plus diverses sans sacrifier les performances. Les compositions de fibres techniques maintiennent une texture douce et des poches d'air pour la thermorégulation et la respirabilité. L'aspect et le toucher adaptés offrent la chaleur et le confort d'une polaire classique. Tricoté avec des fils de polyester de première qualité, Thermal Pro est confortable, résistant et élégant.

Megaloft® offre une alternative fiable et durable au duvet. Cette isolation synthétique conserve son gonflant en minimisant l'encombrement mais en promettant une chaleur supérieure et légère. Résistant à l'eau et polyvalent, l'isolation Megaloft offre une protection et un confort distincts.

Lavawool® est conçu par GORDINI pour combiner la chaleur de la laine avec le confort d'un intérieur polaire. Dans nombre de tests indépendants, Lavawool® surpasse à 100% les leaders de la laine et des principaux tissus synthétiques. Comment ? Lavawool® utilise les propriétés isolantes inhérentes à la laine pour vous garder au chaud. Mais contrairement à la laine pure, qui absorbe et retient l'humidité, Lavawool® élimine rapidement l'humidité de votre peau grâce à son tissage breveté de fibres synthétiques et de laine. Cette originalité des fibres Lavawool® a pour avantage de vous garder plus sec et plus chaud partout où vos aventures hivernales vous emmènent.

Avec ErgoKnit™, Gordini® apporte une technologie révolutionnaire de "tricot 3D" aux protections des mains. La construction en tricot réduit les coutures jusqu'à 80%, offrant plus de chaleur avec moins de volume. Les points flexibles conçus augmentent la dextérité et l'amplitude des mouvements.

Gants conçus avec la technologie GORE-TEX INFINIUM™ WINDSTOPPER® pour offrir un effet coupe-vent absolu tout en étant particulièrement respirant. Ils protègent efficacement contre le refroidissement et assurent une gestion idéale de l'humidité. Cette nouvelle collection est conçue pour offrir un confort d'utilisation optimum.

AVANTAGES :

- TOTALEMENT COUPE-VENT.
- GESTION DE LA RESPIRABILITÉ PARFAITE.
- CONFORT D'UTILISATION MAXIMUM.

Guide des tailles

Pour un meilleur ajustement, placez votre main à plat sur le graphique comme indiqué avec votre pouce et votre selle d'index positionnés sur les axes de la grille. Le dimensionnement est déterminé par la mesure de la longueur du doigt au bout du majeur et par la largeur correspondante de la paume. Si vous êtes entre deux tailles, nous vous recommandons de prendre une taille au-dessus pour un maximum de confort. Le dimensionnement variera légèrement d'un style à l'autre en fonction des niveaux d'isolation..

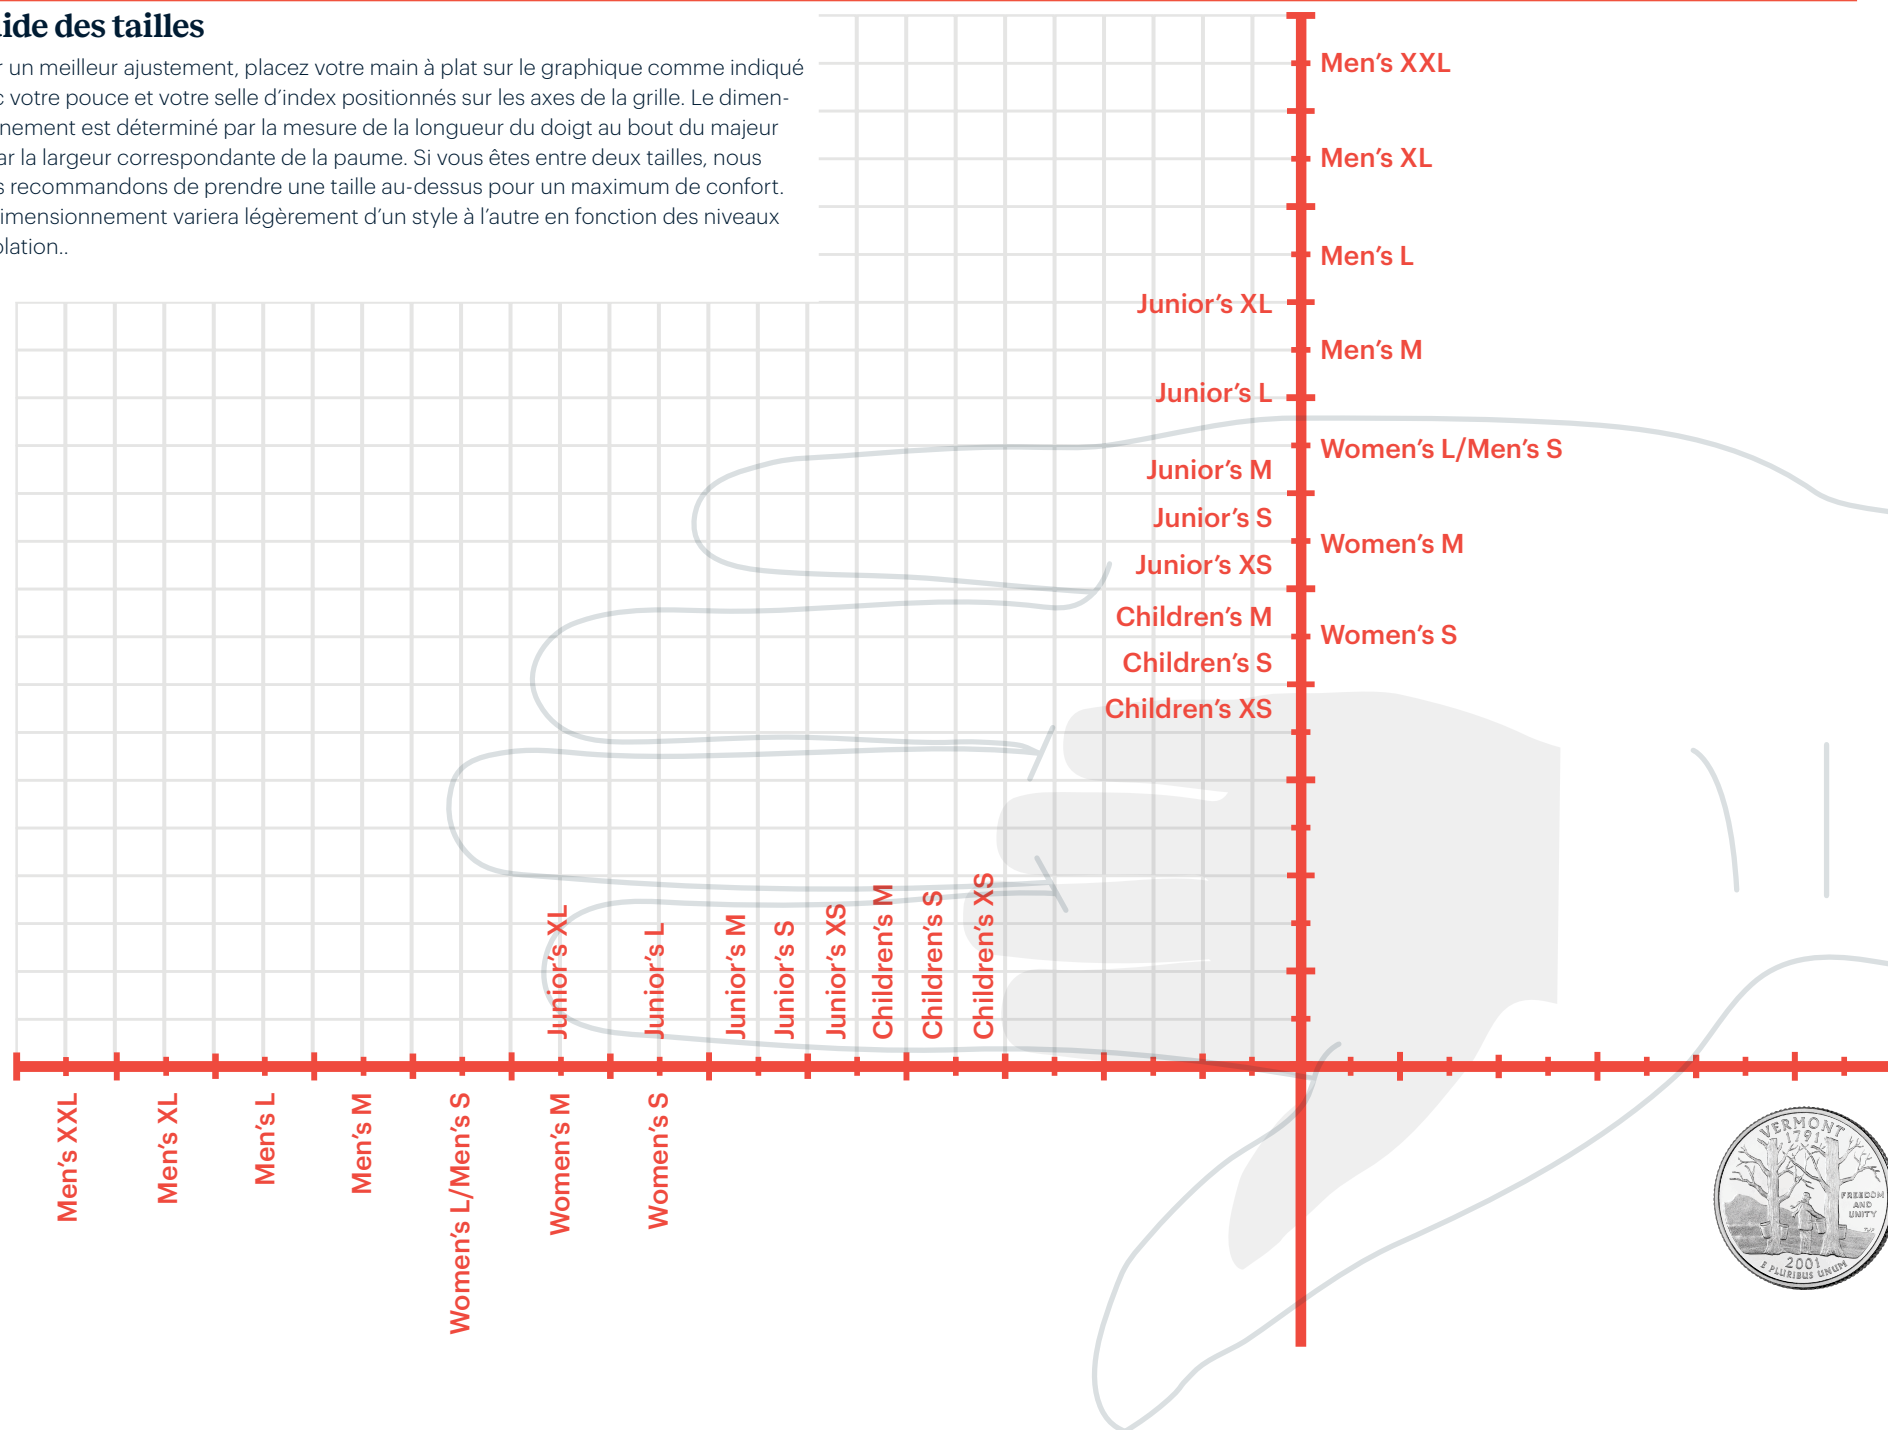

Tableau des tailles de gants

Tour de main : se prend à plat, à partir du creux du pouce autour du bord extérieur opposé de la paume (voir dessin).

LES TAILLES PEUVENT VARIER LÉGÈREMENT D'UN STYLE À UN AUTRE EN FONCTION DES NIVEAUX D'ISOLATION.
